You can check your answer by reading the text below.

Task 1

Read the text on plastic and match the objects to a country on the World map. Write the name of the object in the space for each of the six countries.

A Plastic World

Oil was first discovered in Pennsylvania in 1839. Many of the inventions we have today could not work if we did not have oil. It is used to drive many kinds of transport like cars, buses, planes, and ships which are built in the USA. Oil is also used to heat our houses. Plastic is used in Indonesia to make everything from supermarket bags to computers and mobile phones. In fact, most of the things we use in our lives are made of plastic.

Plastic is used because it is cheap and tough, and can last a long time. New products are invented almost every day. Most toys and games today are produced in China and then they are sent to different parts of the world. Many other more expensive items like mobile telephones are made by big companies in Finland. Look around your house. How many electrical items are made in Japan? Look at your athletic shoes. Maybe they were made in India or Korea. But where does plastic come from? The answer is that plastic is produced from oil.

Lesson 1

In pairs, use the information in the text to write statements about each of the products below:

- Mobile phones
- Plastic bags
- Toys and games
- Ships and planes
- Athletics shoes

Task 2

Plastic is made from oil. When we have run out of oil, what will be used in the future to make different products? In pairs, write a list of raw materials we can use to replace plastic in everyday objects. Then, compare your ideas as a class.

Task 3

Look at your Geography book to find what raw materials are produced in different countries. What products could be made from them?

E.g. China produces clay, which is used to make porcelain.
